SKILL WEEK-5

The image shows a VS Code editor window with a file named `main.py`. The code is a FastAPI application that uses Pydantic for data validation. It defines a `Student` model with fields `id`, `name`, and `department`. A temporary student database is initialized with two entries: Ravi (id: 101) and Priya (id: 102), both in the CSE department. The application is run using `uvicorn` with the `--reload` flag.

```
main.py 2 X
main.py > ...
1  from fastapi import FastAPI
2  from pydantic import BaseModel
3
4  app = FastAPI()
5
6
7  # Student model
8  class Student(BaseModel):
9      id: int
10     name: str
11     department: str
12
13
14  # Temporary student database
15  students = [
16      {
17          "id": 101,
18          "name": "Ravi",
19          "department": "CSE"
20      },
21      {
22          "id": 102,
23          "name": "Priya",
24          "department": "CSE"
25      }
26  ]
27
28
```

Terminal Output:
